Loading Instruction (AMS)

AMS transitions are completed in 3 ways:

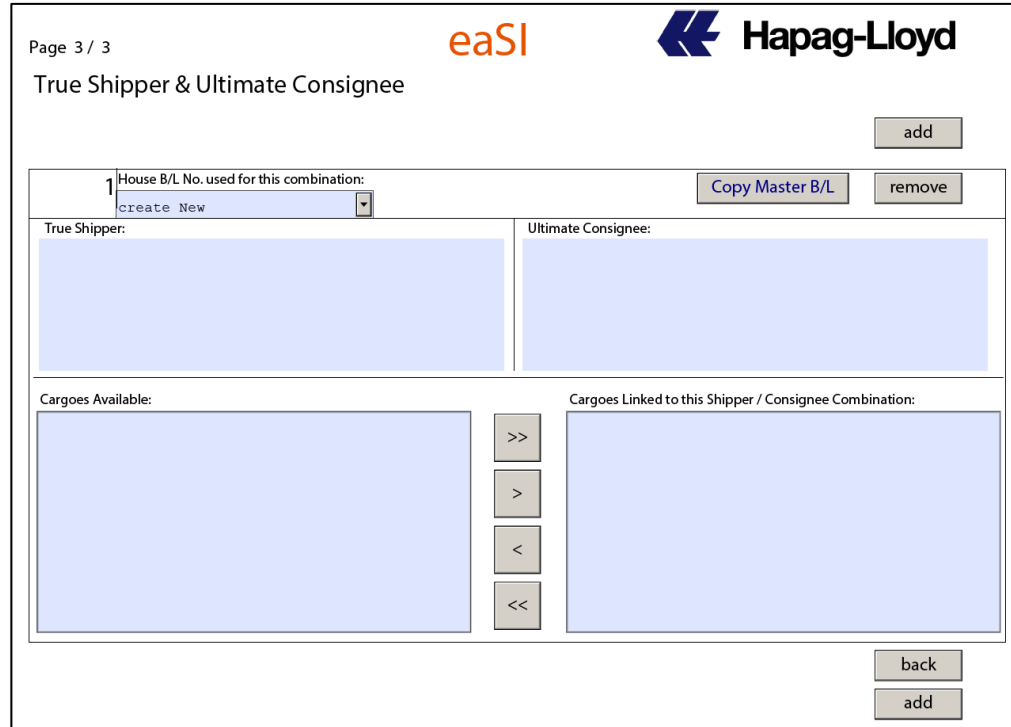

- The line BL and if the AMS transition is requested by the line, the actual loader and buyer information is written on the EASI form and transmitted to us. Then your AMS HBL numbers are processed on the draft.
- Agents can be used on Line BL, but the transitions are made by the customer. Afterwards, the SCAC code transmission is expected by the customer and the SCAC code received from the customer is processed and the transition is made by you. Accordingly, the migration is integrated into the system (AMS HBL number is not created, there is no need to transmit real uploader and receiver information.).
- The real receiver and the real loader are written on the line BL. In this case, the AMS HBL number is not given, the transition is provided automatically and the line does not interfere.
